

SEWER CLEANING NOTICE

Dear Property Owner:

From 11/14/2023 to 11/22/2023, between the hours of 7:00 AM and 3:00 PM, the sewers in your area are scheduled for cleaning in preparation for sewer rehabilitation. **Please keep all toilet lids closed when our crew is working on your street.**

Sewer cleaning requires the use of high pressure water to flush sewer mains. This creates a pressure differential in the sewer main that normally escapes through the roof vent in your sewer connection. Under unusual circumstances, it is possible for this pressure differential to push the contents of your sewer trap into your sinks, showers, bathtubs, toilets etc. The possibility also exists that the pressure differential could drain the contents of your sewer trap entirely. Conditions that could cause this adverse effect are: old plumbing that has not been updated as well as roof vents that are not operating properly or partially/completely restricted.

Some residents choose to put towels on the floor around toilets and/or place pots, pans or buckets over interior plumbing drains to contain any backflow your home may experience.

During some phases of the operation you may detect an odor. Odors are most likely to occur in buildings with dry or non-existent traps. In most cases, odors can be minimized by pouring several gallons of water down your plumbing fixtures (sinks, showers, toilets, bathtubs etc.) and basement floor drains, and then open windows to ventilate.

Please note that if you have sump pumps or yard drains connected to the sewer lateral, these may be affected as well.

If you have any questions or concerns, please do not hesitate to speak with our crew working on your street making sure to provide your contact information and house number.

Thank you for your cooperation.
